Propoxyphene	✓	✓				
Zolpidem	✓	✓				
Methcathinone	✓					

Please make sure to select the respective testing panel when ordering the test.

Hair Growth Explained

The typical hair test uses a 1.5 inch (3.81 cm) segment of head hair collected from close to the scalp. Since the average growth rate of human head hair is approximately 1/2 inch (1.3 cm) per month, a typical hair test covers an approximately 90 day time frame.
